demand\_bio  
Another environmental issue getting attention is the loss of biodiversity (i.e. the variety of plants, animals, and microorganisms that make up the living world).  
Do you think governments should be doing more, less, or about the same as now

afford\_mix

Base = 916

Governments and utilities in Canada need to make decisions over how to supply growing electricity demand for consumers while lowering emissions.

One option is to invest heavily in electricity technologies like small nuclear reactors and fossil fuels like natural gas, along with some renewable energy to ensure a reliable transition to an electricity system with fewer emissions by 2035.

To what extent do you think this energy transition will...

Governments and utilities in Canada need to make decisions over how to supply growing electricity demand for consumers while lowering emissions.

One option is to invest heavily in electricity technologies like small nuclear reactors and fossil fuels like natural gas, along with some renewable energy to ensure a reliable transition to an electricity system with fewer emissions by 2035.

To what extent do you think this energy transition will...
